1. Confidentiality 2. Integrity 3. Availability

Front: A hospital locks its patient files room so only authorized staff can enter. (Confidentiality)

Front: A team double-checks the final numbers in a report before sending it to clients. (Integrity)

Front: The company keeps extra copies of its payroll system so employees can view their pay slips even if one server goes down. (Availability)

Front: Only managers have the keycard to access the HR folder on the shared drive. (Confidentiality).

Front: An employee notices that the sales figures in yesterday's spreadsheet don't match today's and alerts IT. (Integrity)

Front: During a network upgrade, IT sets up a temporary backup link so staff never lose email access. (Availability).

Front: Customer support can see orders but cannot view credit-card details. (Confidentiality)

Front: Before approving any change to the website, the team compares it with last week's version to make sure nothing's broken. (Integrity).

Front: When the data center's air-conditioning fails, the backup site stays online. (Availability)

Front: A receptionist cannot open the CEO's confidential correspondence folder. (Confidentiality)

Front: After a power surge, IT restores files from a recent backup to correct corrupted documents. (Integrity)

Front: The company signs a service-level agreement guaranteeing 24/7 access to its online portal. (Availability).

Front: Interns are prevented from viewing sensitive client contracts. (Confidentiality).

Front: A typo in the database entry is caught and fixed before invoices go out. (Integrity).

Front: The website redirects users to a "maintenance" page only for a brief, scheduled window. (Confidentiality).

Front: Only the finance team can open and edit the budget spreadsheet. (Confidentiality)

Front: An audit finds someone deleted a line from last month's report, and it's immediately corrected. (Integrity).

Front: The online booking system uses two identical servers so reservations can still go through if one fails. (Availability)

Front: Visitors to the office must check in and wear a badge before accessing work areas. (Confidentiality).

Front: After a minor crash, all user profiles load normally because they're stored on a redundant system. (Availability)
